

## Press release

### **WiFi hotspot on the bus – free trial**

#### **HOTSPLOTS offers a three-month test period for passenger WiFi with BOSCH Coach Media Router**

**Berlin, 26.09.2019 – Passenger WiFi and the HOTSPLOTS Telemetry service are now offered to bus operators to be used free of charge for three months.**

Prerequisite for using the trial period is an installation of the Bosch Coach Media Router (BCMR) as WiFi router in the own busses. Equipped with its own SIM card and connected to a LTE antenna, the test period for the WiFi services can be started immediately by the operator.

During the three months period, passengers can surf the Internet via the vehicle's WiFi hotspot. With Direct-Login, passengers can instantly get access to the Internet by a single click and use the service free of charge.

In addition to the free service for passengers, bus operators benefit from extensive statistical data on hotspot usage and free access to HOTSPLOTS Telemetry during the test period. As a basic fleet management service, HOTSPLOTS Telemetry for instance enables operators to evaluate the signal strength of the mobile network connection along the routes travelled.

More information about the campaign can be found at <https://www.hotspots.de/TryAndBuy>.

### **Busworld Europe**

Visit our WiFi experts from HOTSPLOTS at the Busworld in Brussels from 18 to 23 October. We will be presenting the Try&Buy promotion at the BOSCH stand (Hall 5, Stand 518).

The free trial period ends automatically after the three months have expired. Accordingly, a cancellation by the bus operator is not necessary. Additional costs may arise for the SIM card used by the bus operator, which depend on the respective provider.

### **About hotspots GmbH**

hotspots GmbH has been operating as a WiFi provider since 2004. The more than 17,000 active hotspot locations in Europe include stationary hotspots in cities and communities, hotels, clinics, youth hostels, student dormitories and at public bus stops as well as a large number of mobile hotspots in trains, buses and trams for public transport and long-distance travel.

The HOTSPLOTS WiFi solutions offer safety by means of VPN routing, intelligent bandwidth management, flexible access and reporting options. Customers from public transport and travel benefit from a fast vehicle-land connection at their mobile hotspots. The modular HOTSPLOTS WiFi portal offers the possibility to integrate tourist information, digital newspapers and magazines as well as

entertainment content.

If requested, HOTSPLOTS takes over the technical and legal operation of the networks, supplies Internet connections or SIM cards or also provides temporary WiFi hotspots for events.

Further information can be found on the website: [www.hotspots.de](http://www.hotspots.de).
